

ANSWER No. 1

Algorithm: $\Rightarrow$

A process or set of rule to be followed in calculation or other problem solving operation specially by a computer.

$\Rightarrow$ Importance in problem solving.

Time Saving:

Algorithm break big problem into small, easy step, making them simpler to solve.

Efficiency:

They help find the quickest and best way to reach a solution.

Accuracy:

Algorithm follow step by step instruction and reduce mistake.

Example:

Algorithm calculate the sum of the two number.

Algorithm:-

Step 1: Start

Step 2: Input two number x and y .

Step 3: Sum $x + y$

Step 4: Print Sum

Step 5: End.

ANSWER NO: 2

Flow chart:

A Flowchart is a diagram or visual representing the sequence of action to solve a problem.

Representing algorithm:

It show step by step form how to operation.

Advantages:-

Simplify problems

They Breaks
by problems into smaller and
clear steps.

ANSWER No:3

Calculate the sum of two number

⇒ Algorithm:

Step 1: Start

Step 2: Input number "a"

Step 3: Input number "b"

Step 4: calculate the sum "a+b"

Step 5: Print "Sum"

Step 6: End

Flowchart:

ANSWER NO: 4

Algorithm:

Step 1: Start

Step 2: Input 40

Step 3: If marks ≥ 40 then
go to step 4 else step 5.

Step 4: output "Pass go to step 6.

Step 5: output Fail

Step 6: End

Flow chart:
